**●/A2**

**▼/R3**

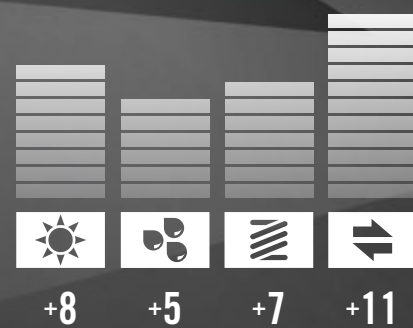

**▼/RG**

**▼/SD**

**/SOFT**

**●/AQUA**

**▼/SOLID**

**▼/R3**

The Reusch flagship for professional goalkeeping on artificial and hard surfaces! Thanks to a brand new composition of the latex, the R3 Mega Solid represents our ultimate compromise between being extremely durable, while at the same time offering very good grip properties and cushioning.

This high quality palm foam is produced in Germany.

**▼/RG**

Characterized by good abrasion resistance and damping properties thanks to its structured and sturdy surface, the RG Resist Grip is perfectly suited for goalkeeping on artificial and hard grounds.

**▼/SOLID**

THE PERFECT COMBINATION OF DURABILITY AND GRIP.

**/SOFT**

UNPARALLELED GRIP ON NATURAL GRASS.

**/G3<sup>FUSION</sup>**

Step up your game with our most advanced palm foam ever! This completely new latex mixture including special adhesive additives is equipped with the best grip properties of all times, great abrasion resistance and outstanding wet-weather performances. The extremely tacky G3 Ultra Soft foam has been fused with speckled latex injections to boost the palm's all-round performance: highly resistant black Solid latex dots noticeably increase the durability; blue Aqua latex dots with the innovative Hydrograin™ technology push the grip in rainy conditions to a new level. Ready to master all situations!

This high quality palm foam is produced in Germany.

**/G3**

More grip, more stickiness, more power: by completely refining the G2 latex mixture and adding special adhesive additives, we created the Reusch palm foam with the best grip properties of all times, great cushioning and improved resistance: the G3 Ultra Soft. Ultimate grip properties in dry conditions but also very good performances in wet environments make this palm foam the first choice of most professional Reusch goalkeepers.

This high quality palm foam is produced in Germany.

**/S1**

As its name implies, the S1 Super Soft is one of our softest palm foams, delivering very good results in terms of grip and cushioning as well as reliable abrasion resistance when used on natural grass.

This high quality palm foam is produced in Germany.

**●/AX2**

Thanks to the revolutionary Hydrograins™, the AX2 Hydro Grip is our palm foam with the best grip in wet conditions of all times. Activated by warm water, these thermo granulates boost the grip properties in wet conditions to a new level. While being unbelievably soft for outstanding grip properties, the AX2 palm features an increased abrasion resistance due to the special Dura-bond™ Technology, based on special additives strengthening the structure of the latex mixture and so making it absolutely suitable to be used on natural grass as well as on artificial grounds.

This high quality palm foam is produced in Germany.

**●/A2**

This especially engineered palm foam for goalkeeping in wet conditions on natural grass stands out with very soft and open-pored latex, guaranteeing outstanding grip in wet but also dry conditions without losing its abrasion resistance. The foam's special composition additionally increases its damping qualities and sturdiness.

This high quality palm foam is produced in Germany.

**●/AQUA**

FOR AN EXCEPTIONAL NON-SLIP GRIP IN THE RAIN.

# GLOVE CUTS

AS ONE OF THE MOST IMPORTANT CHARACTERISTICS OF A GOALKEEPER GLOVE, THE CUT DECIDES ABOUT THE BALL CONTROL, THE CATCHING ABILITY AND THE WEARING COMFORT. REUSCH OFFERS FIVE FINGER CUTS WITH VERY DISTINCTIVE CHARACTERISTICS IN ORDER TO SATISFY ALL OF THE GOALKEEPERS' DIFFERENT NEEDS AND TASTES.

## EVOLUTION CUT

The palm latex gets completely rolled around the fingertips, ensuring the biggest possible latex-to-ball contact area in this crucial zone. The seamless fingertip construction guarantees a tight fit and best ball control. An outer seam construction with breathable mesh gussets in the lower parts of the fingers brings the glove in an anatomically pre-shaped position and makes it extremely soft, smooth and flexible.

## EVOLUTION NEGATIVE CUT

This highly functional cut is a tighter fitting version of the successful Evolution Cut. The palm latex gets completely rolled around the fingertips, ensuring the biggest possible latex-to-ball contact area in this crucial zone. The seamless fingertip construction guarantees a tight fit and best ball control. The negative stitched lower part of the fingers with latex gussets brings the glove in an anatomically pre-shaped position and makes it extremely tight, soft, smooth and flexible.

## EXPANSE CUT

The Expanse Cut, our version of the flat cut, is mostly characterized by its outer seams enlarging the inner surface of the palm. The increased latex-to-ball contact area makes catching much easier.

## ROLL FINGER

The palm latex is rolled up all the way to the backhand, wrapping up the fingers completely in latex. While surrounding the fingers ergonomically, the palm material totally abandons any seams and provides the largest possible catching area.

## NEGATIVE CUT

In this classic inner-seam construction all seams are located inside the glove. The cut is characterized by a very tight fit generating great tactility and high ball control.
